CPSC 501 – Assignment 2

Artem Golovin 30018900

Overview

ObjectInspector is a reflective object inspector. It performs complete object inspection at a runtime. Inspector handles the object inspection. General project setup is described in project README.md. Project can also be found on GitLab artem.golovin/ObjectInspector

Refactoring

Some refactoring was done to the project after the working version was implemented. The following is the list of commits with description of what refactoring was done

Implement InspectorResult to store inspected information; Implement FieldPair to make it easier to test object inspection e9870e19, d6a2812c

It was necessary to implement some sort of storage for object inspection in order to test the Inspector#inspect(Object, boolean) properly. InspectorResult contains different HashMaps to store inspected information about object. Using that class, we can test the inspect method without having to compare outputs.

Use IndentedOutput interface and use custom for Each to iterate array (645bfdce)

Since the output needs to be indented in order to make it easier to read and to say which values are nested, IndentedOutput and method indentOutput helps to achive that result. Originally, indentation was calculated per each inspect method. To remove duplicated code, indentOutput method was added.

Extract value inspection into its own method (c039ea3e)

inspectArray and inspectField were performing the same tasks, therefore to eliminate redundant code, inspectValues method was added.

Git Log

5ec816d Artem Golovin Initial commit 788ddbb Artem Golovin Add option to output inspection results in std out c84133d Artem Golovin Implement inspectSuperclass method and add function for padded output bff1f6f Artem Golovin Implement inspectInterfaces method 67279bd Artem Golovin Implement inspectConstructor method 5a3c07a Artem Golovin Implement inspectMethod method 7f2db0a Artem Golovin Implement inspectFields and inspectArray deb1f1d Artem Golovin Add basic README, move test classes to data package and create inspector package afce1c3 Artem Golovin Add step to inspect array object 2ad8560 Artem Golovin Change newline characters 7db97f7 Artem Golovin Add util join method and rename Console to Utils 3ab0166 Artem Golovin Store inspected objects in HashMap's for testing and add simple tests 540bb7a awave1 Inspect methods and fields when inspecting interfaces instead of inspecting class b73d7e6 Artem Golovin Add InspectorResult object to store results of object inspection d6a2812 awave1 Add Insp	Commit	Author	Description
